Exercises for chapter 8

The file Bertrand_Mullainathan_exercises_data.csv contains data extracted from a widely cited economics article on racial discrimination (Bertrand & Mullainathan, 2004). The authors randomized various characteristics on resumes they sent to potential recruiters and measured the callback rate.

Exercise 1. Build a 90%-CI for the regression coefficient representing the effect of race on the probability of getting a call back, with no covariate, then with all the covariates.
